

GEOLOGIC DATING LAB

Principles and Applications

Geology Laboratory - GEOL 101

Ray Rector - Instructor

Earth's Age and History

How Old Is the Earth?

How Can We Determine Earth's Geologic History?

Scientific Means of Dating Earth

Two Primary Means of Dating Rocks:

1) Relative Dating

- ✓ Determines the temporal order of rock forming events
- ✓ Does not give numeric ages
- ✓ Use of stratigraphic principles and fossils

2) Absolute Dating

- ✓ Determines the numeric age of rock forming events
- ✓ Only appropriate for ages of igneous rocks and minerals
- ✓ Primary method is the *radiometric technique*
- ✓ Used in conjunction with stratigraphic principles and fossils

Relative Versus Absolute Dating

Relative Dating

Stratigraphic principles

Fossil Succession

Emphasis on Sed Rocks

Absolute Dating

Radiometric techniques

Emphasis on Igneous Bodies

How Can We Figure Out the Age Sequence of Geologic Events?

The Stratigraphic Principles

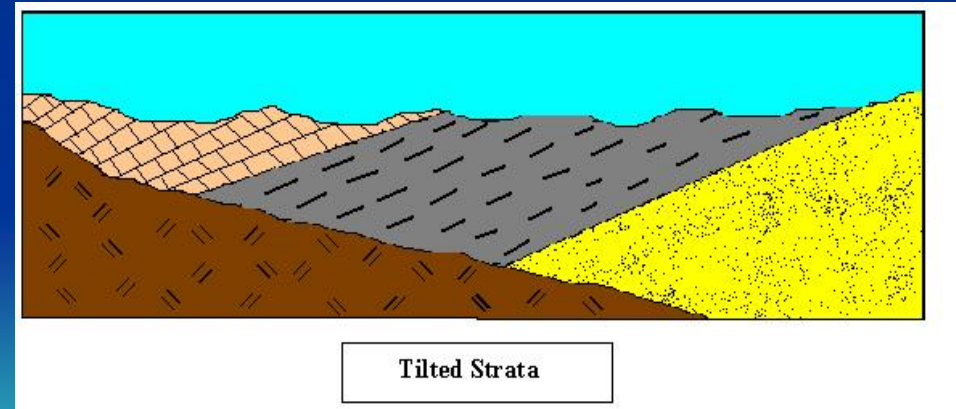

- 1. Original Horizontality** - All sedimentary rocks are originally deposited horizontally. Sedimentary rocks that are no longer horizontal have been tilted from their original position.
- 2. Lateral Continuity** - Sedimentary and volcanic rocks are laterally continuous over large areas.
- 3. Superposition** - Oldest layer occurs at base of a layered sequence and is overlain by progressively younger rock layers.
- 4. Cross-Cutting Relations** - If a body or discontinuity cuts across a rock structure, it must have formed after that stratum.
- 5. Law of Inclusions** - Rock fragments (in another rock) must be older than the rock containing the fragments.
- 6. Law of Fossil Succession** - Unique fossil groups were succeeded by other fossil groups through time.

Principle of Original Horizontality

Sedimentary rock units originally deposit in horizontal layers

Later events may cause the layers to become tilted or overturned

Principle of Lateral Continuity

Layers of sedimentary material initially extend laterally in all directions.

The layers eventually thin to zero and either terminate at the ends of the sedimentary basin or grade into other units.

Principle of Superposition

In a vertical stack of layered rock units, the overlying unit is younger than the underlying unit.

The youngest rock layer is on top – the oldest layer is on the bottom.

Marine Transgression

Marine Transgression

Different sedimentary lithologies can stack on top of each other over time due to transgressions and regressions

Principle of Cross-Cutting Relations

The rock unit whose layer is being crosscut (disrupted or offset) is older than the rock unit or fault that is doing the crosscutting.

Principle of Inclusions

The rock unit that surrounds the inclusions must be younger than the inclusions.

Principle of Fossil Succession

Key Idea:

- ✓ Based on relative dating (law of superposition) and the use of age-specific (index) fossils species.
- ✓ Unique fossil species of a specific age range are temporally succeeded by other younger fossil species through time.
- ✓ A rock that contains a specific assemblage of index fossils must be the age of when those organisms (now fossils) were all alive.

Constraining the age (range) of an index fossil assemblage

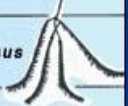

Index Fossils

Criteria to be a Useful Index Fossil:

Must have:

- 1) Narrow time range age
- 2) Worldwide distribution
- 3) Preserve in a wide range of depositional settings

CENOZOIC ERA (Age of Recent Life)	Quaternary Period	<i>Pecten gibbus</i>		<i>Neptunea tabulata</i>	
	Tertiary Period	<i>Calyptraphorus velatus</i>		<i>Venericardia planicosta</i>	
MESOZOIC ERA (Age of Medieval Life)	Cretaceous Period	<i>Scaphites hippocrepis</i>		<i>Inoceramus labiatus</i>	
	Jurassic Period	<i>Perisphinctes tiziani</i>		<i>Nerinea trinodosa</i>	
	Triassic Period	<i>Trochites subbullatus</i>		<i>Monotis subcircularis</i>	
	Permian Period	<i>Leptodus americanus</i>		<i>Parafusulina bosei</i>	
PALEOZOIC ERA (Age of Ancient Life)	Pennsylvanian Period	<i>Dictyoclostus americanus</i>		<i>Lophophyllidium proliferum</i>	
	Mississippian Period	<i>Cactocrinus multibrachiatus</i>		<i>Prolecanites gurleyi</i>	
	Devonian Period	<i>Mucrospirifer mucronatus</i>		<i>Palmatolepus unicornis</i>	
	Silurian Period	<i>Cystiphyllum niagarense</i>		<i>Hexamoceras hertzeri</i>	
	Ordovician Period	<i>Bathyrurus extans</i>		<i>Tetraraptus fructicosus</i>	
	Cambrian Period	<i>Paradoxides pinus</i>		<i>Billingella corrugata</i>	
PRECAMBRIAN					

Three Types of Unconformities

1. Disconformity

2. Angular Unconformity

3. Nonconformity

Sedimentation of beds A–D beneath the sea

Uplift above sea level and exposure of D to erosion

Continual erosion strips D away completely and exposes C to erosion

Subsidence below the sea and sedimentation of E over C; erosion surface of C preserved as an unconformity

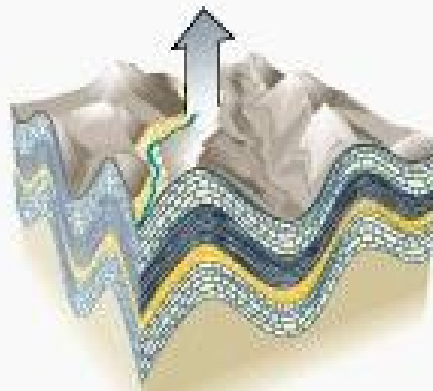

Formation of a disconformity

Sediments deposited beneath the sea

Folding and deformation during mountain building; exposure to erosion

Surface is eroded to an uneven plain

Subsidence below sea level and younger sediments deposited on former erosion surfaces

Formation of an angular unconformity

Three Types of Unconformities

1. Disconformity
2. Angular Unconformity
3. Nonconformity

Name the Types of Unconformities

A

B

C

A? _____

Application of Relative Dating Principles to a Geologic Cross Section

Procedure:

- 1) Identify all labeled rock formations and structures, including intrusions, faults, and unconformities
- 2) Use relative dating laws (*mainly the laws of superposition and cross-cutting*) to determine the relative age sequence for all stratigraphic elements – from oldest to youngest.
- 3) Determine what types of unconformities there are.

Application of Relative Dating Principles to a Geologic Cross Section

Procedure:

- 1) Identify all labeled rock formations and structures, including intrusions, faults, and unconformities
- 2) Use relative dating laws (*mainly the laws of superposition and cross-cutting*) to determine the relative age sequence for all stratigraphic elements – from oldest to youngest.
- 3) Determine what types of unconformities there are.

1. _____ mya to _____

2. _____ mya to _____

Resolved age of sample: _____ mya to _____ mya

Spontaneous Radioactive Decay

Three Types of Radioactive Decay

- 1) Alpha Emission
- 2) Beta Emission
 - Beta minus
 - Beta plus
- 3) Gamma Emission

Radiometric Dating of Minerals

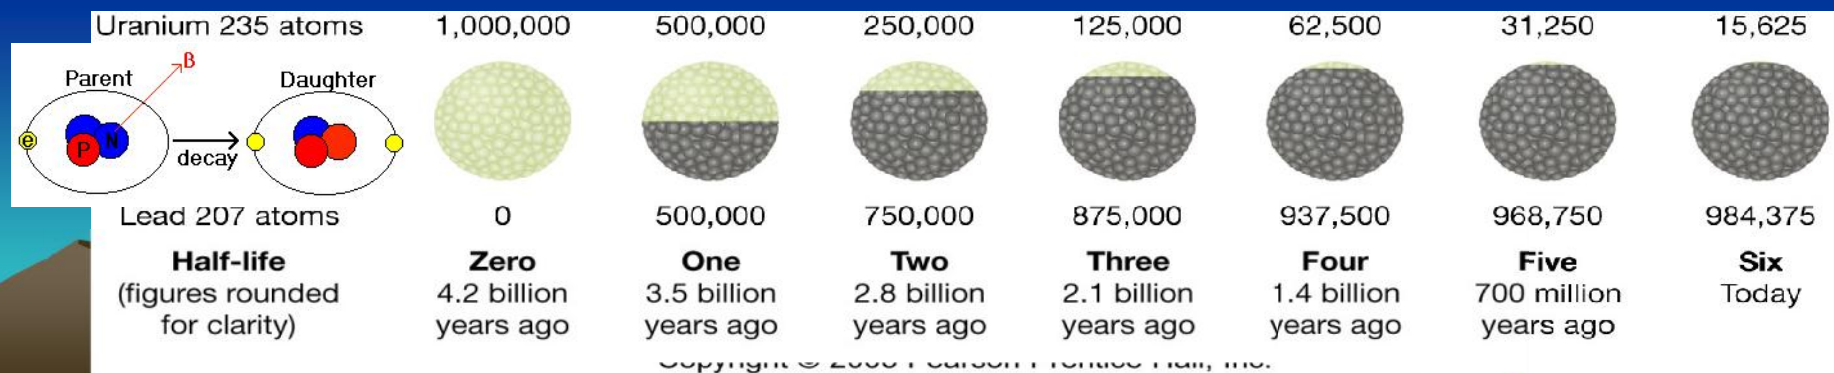

Zircons Crystals

Principles of Radiometric Decay

The Principles

- ✓ Spontaneous decay of unstable parent element into a its unique stable daughter element
- ✓ The half-life of each parent-daughter pair is a constant
- ✓ Age of an igneous rock is determined by measuring the ratio of rock's parent-daughter material

Radiometric Half-Lives

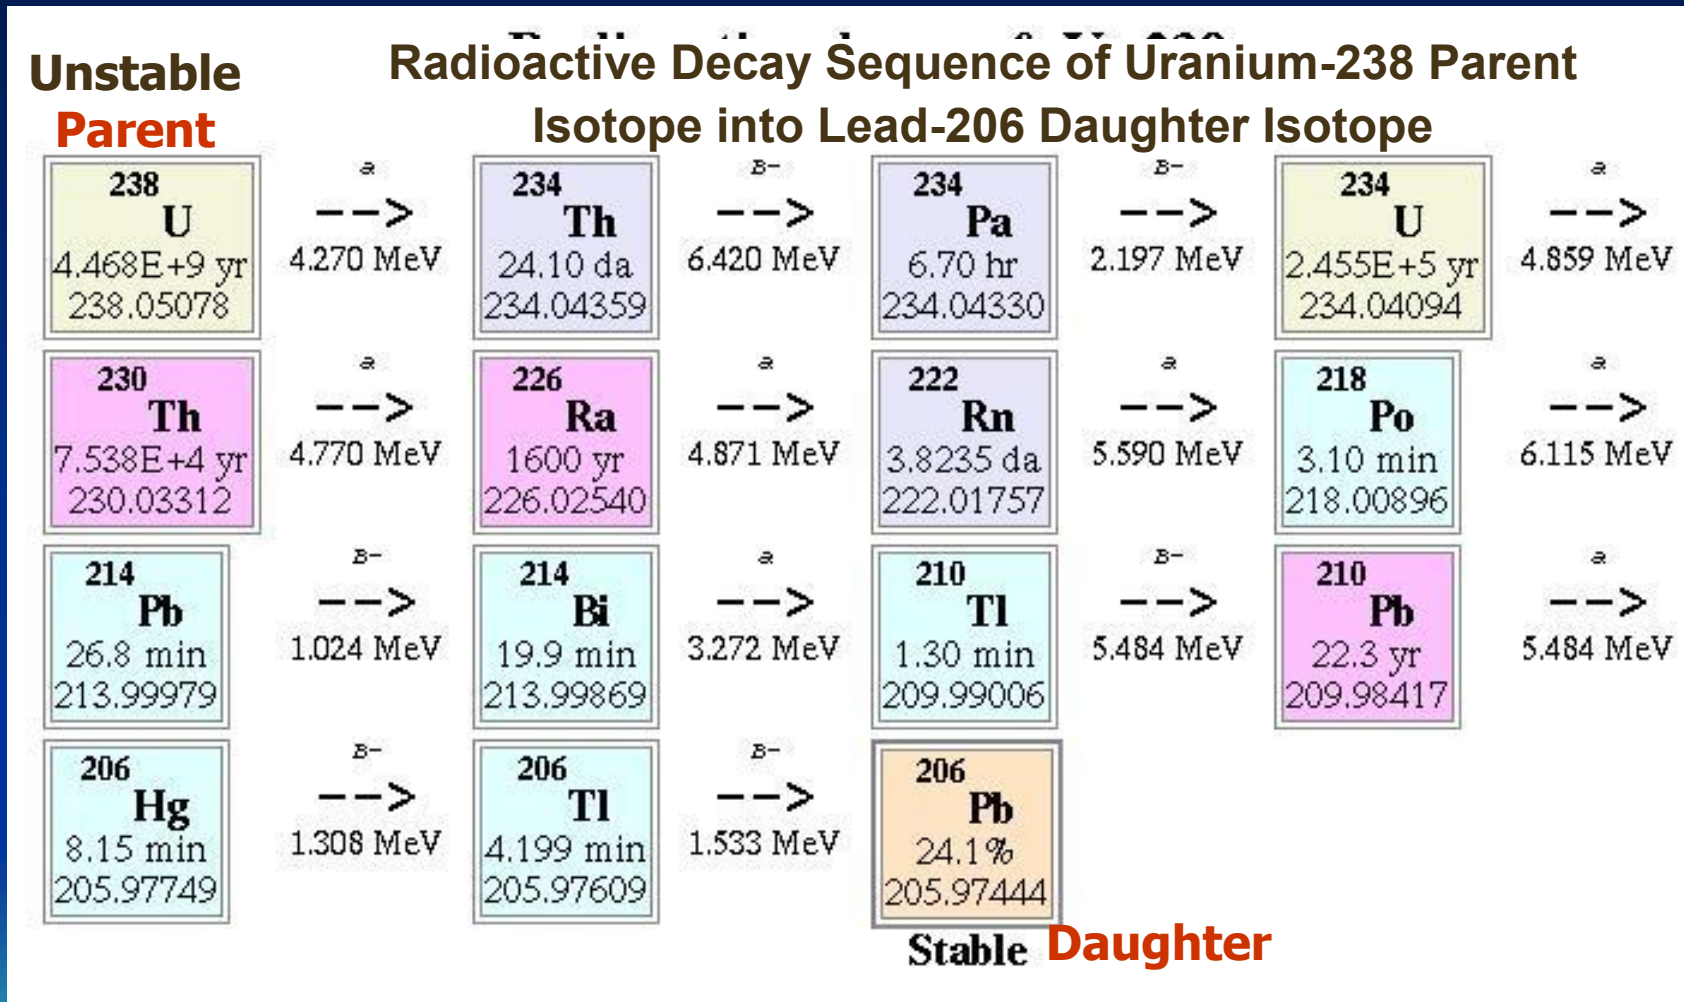

Radioactive Parent/Daughter Pairs and Associated Half-Lives

Parent Isotope	Stable Daughter Product	Currently Accepted Half-Life Values
Uranium-238	Lead-206	4.5 billion years
Uranium-235	Lead-207	713 million years
Thorium-232	Lead-208	14.0 billion years
Rubidium-87	Strontium-87	48.8 billion years
Potassium-40	Argon-40	1.25 billion years
Samarium-147	Neodymium-143	106 billion years

Isotopic Decay Sequence

➤ Half-life of U-238/Pb-206 system is 4.5 billion years

Radiometric Dating Method

Analysis of Parent/Daughter Isotopic Compositions in Rocks

- ✓ Parent and daughter elements are isolated and refined from host mineral using conventional wet chemistry methods.
- ✓ Geochronologists determine the isotopic abundances of each paired parent and daughter element using a mass spectrometer.
- ✓ Isotopic abundance data are then used to determine rock age using the decay formula.

Mass Spectrometer

Radiometric Dating Method

Radioactive Decay of Parent Isotope into a Daughter Isotope

The mathematical expression that relates radioactive decay to geologic time is called the *age equation*:

More simply, all you need to do is multiply the number of elapsed half-lives of the parent-daughter's isotopic system in the mineral (or whole rock) by the system's half-life decay constant:

$$t = \frac{1}{\lambda} \ln \left(1 + \frac{D}{P} \right)$$

where t is the age of the rock or mineral specimen,
 D is the number of atoms of a daughter product today,
 P is the number of atoms of the parent isotope today,
 \ln is the natural logarithm (logarithm to base e), and
 λ is the appropriate decay constant.

(The decay constant for each parent isotope is related to its half-life, $t^{1/2}$ by the following expression: $t^{1/2} = \frac{\ln 2}{\lambda}$)

Age Formula: # of half-lives elapsed x half-life constant

Radiometric Dates of Earth Rocks

The Earth's Oldest Rocks

Description	Technique	Age (in billions of years)
Amitsoq gneisses (western Greenland)	Rb-Sr isochron	3.70 ± 0.12
Amitsoq gneisses (western Greenland)	^{207}Pb - ^{206}Pb isochron	3.80 ± 0.12
Amitsoq gneisses (western Greenland) (zircons)	U-Pb discordia	3.65 ± 0.05
Amitsoq gneisses (western Greenland) (zircons)	Th-Pb discordia	3.65 ± 0.08
Amitsoq gneisses (western Greenland) (zircons)	Lu-Hf isochron	3.55 ± 0.22
Sand River gneisses (South Africa)	Rb-Sr isochron	3.79 ± 0.06

Radiometric Dates of Moon Rocks

Oldest Moon Rocks

Mission	Technique	Age (in billions of years)
Apollo 17	Rb-Sr isochron	4.55 +/- 0.1
Apollo 17	Rb-Sr isochron	4.60 +/- 0.1
Apollo 17	Rb-Sr isochron	4.49
Apollo 17	Rb-Sr isochron	4.43 +/- 0.05
Apollo 17	Sm-Nd isochron	4.23 +/- 0.05
Apollo 17	Sm-Nd isochron	4.34 +/- 0.05
Apollo 16	$^{40}\text{Ar}/^{39}\text{Ar}$	4.47
Apollo 16	$^{40}\text{Ar}/^{39}\text{Ar}$	4.42

Radiometric Dates of Meteorites

Meteorites

Description	Technique	Age (in billions of years)
Juvinas (achondrite)	Mineral isochron	4.60 +- 0.07
Colomera (silicon inclusion, iron met.)	Mineral isochron	4.61 +- 0.04
Carbonaceous chondrites	Whole-rock isochron	4.69 +- 0.14
Bronzite chondrites	Whole-rock isochron	4.69 +- 0.14
Krahenberg (amphoterite)	Mineral isochron	4.70 +- 0.1
Norton County (achondrite)	Mineral isochron	4.7 +- .1

RADIO-ISOTOPIC DATING ACTIVITY

Applied to Stratigraphy in Conjunction with Relative Dating

Procedure:

- 1) Use relative dating laws to determine the relative age sequence for all stratigraphic elements – from oldest to youngest.
- 2) Identify all igneous units and determine their absolute ages using the radio-isotopic method
- 3) Write absolute ages on the relative date list
- 4) Use relative and

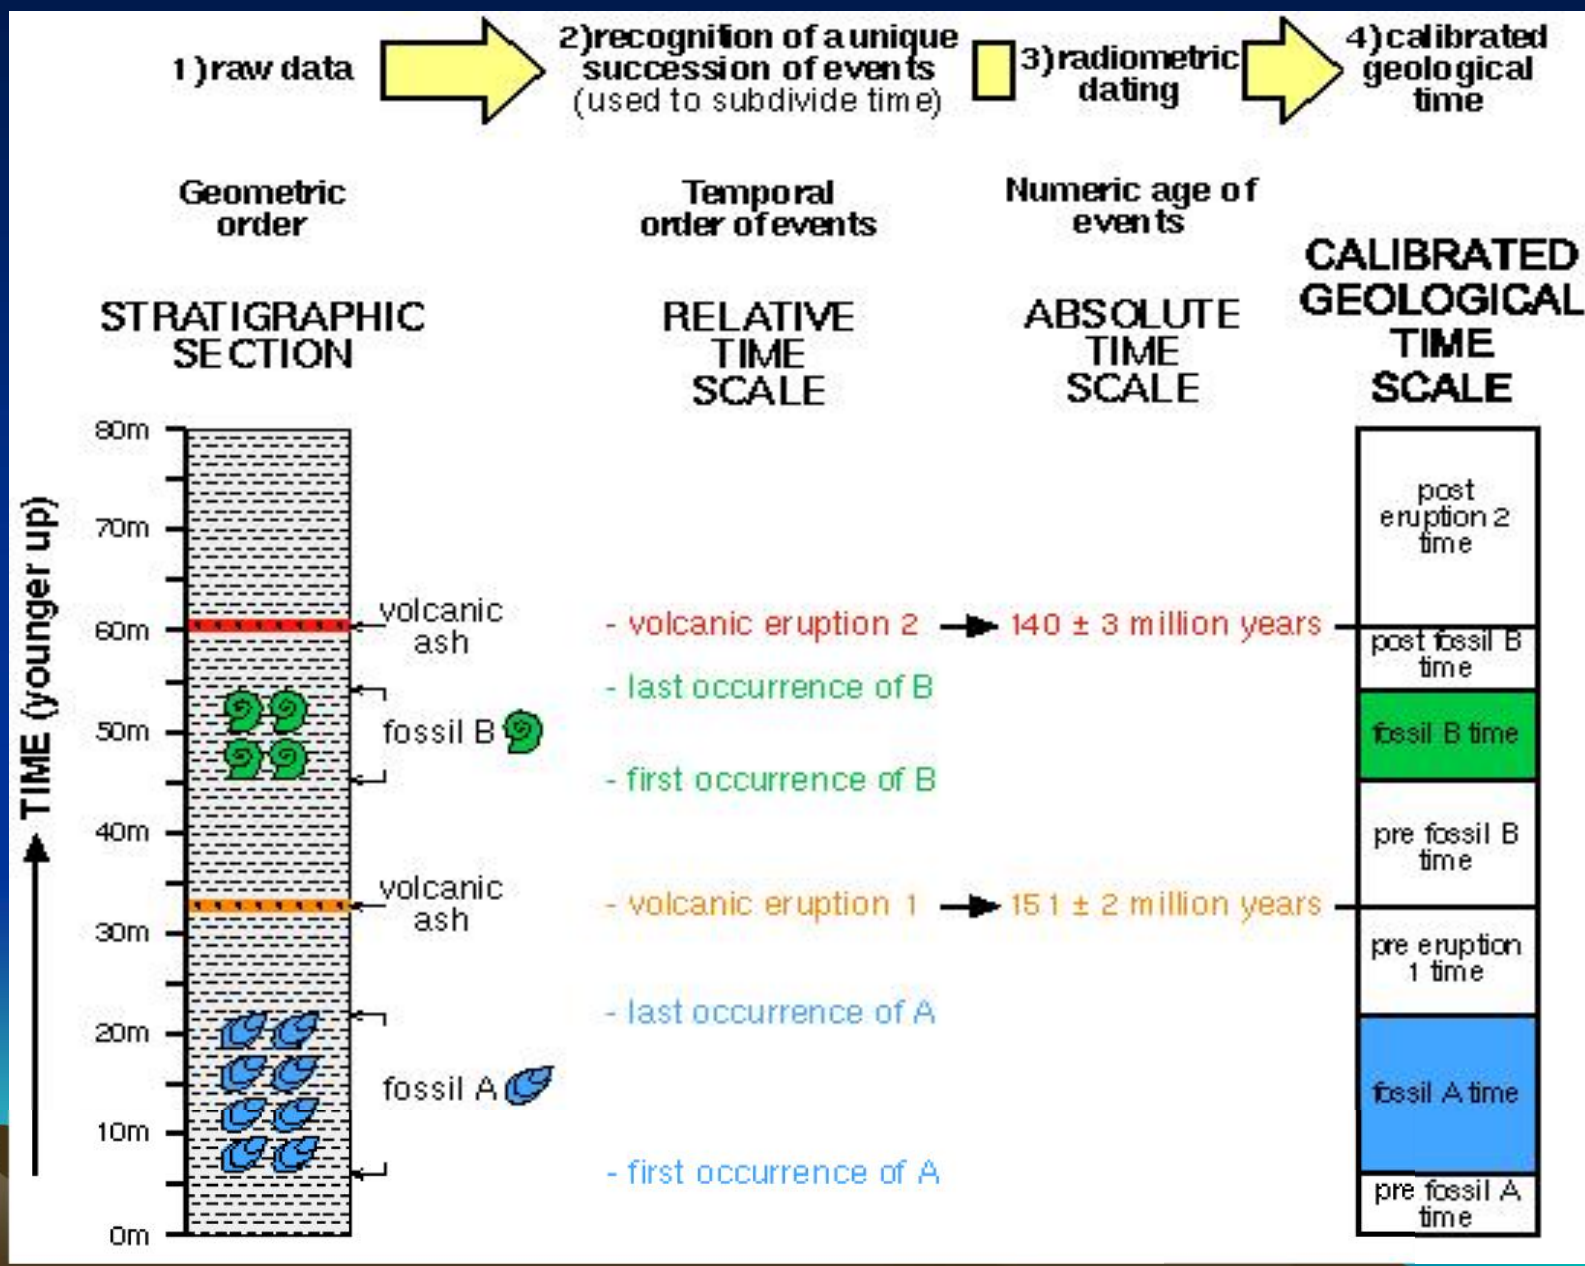

Youngest _____

Oldest _____

Note: There are four igneous rock units

Combined Use of Relative and Absolute Dating

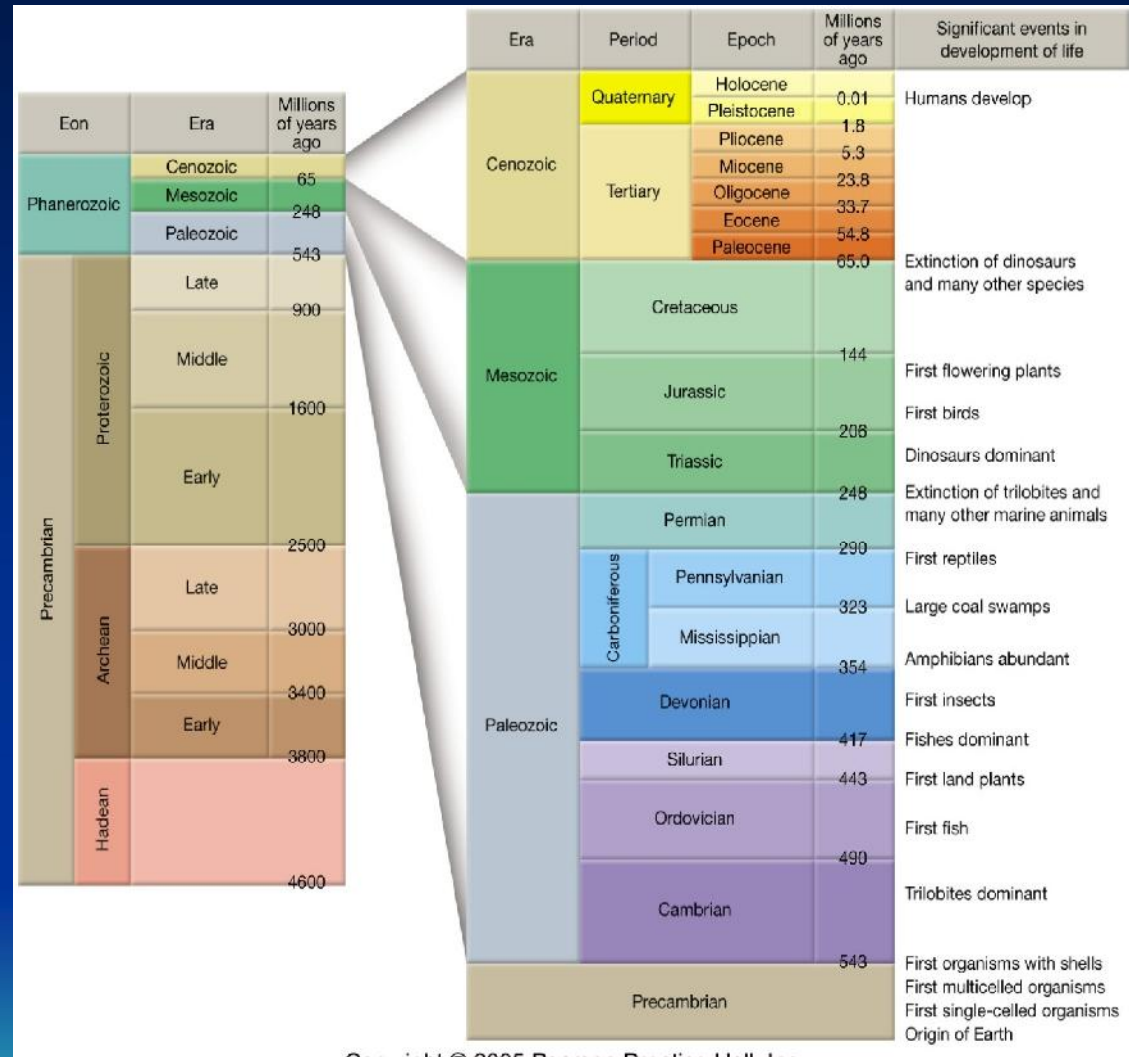

THE GEOLOGICAL TIMESCALE

Key Ideas:

Originally based on relative dating and the use of age-specific (index) fossils

✓ Periods separated by major mass extinction events

✓ Numeric ages derived from radiometric analysis of igneous rocks found within the stratigraphic record

Copyright © 2005 Pearson Prentice Hall, Inc.

Note: You will need to memorize the basic geo-timescale for the final exam.

THE COMPLETE GEOLOGICAL TIMESCALE

2009 GEOLOGIC TIME SCALE

THE TWISTED GEOLOGICAL TIMESCALE

THE GEOLOGICAL TIMESCALE QUIZ

Need to Memorize:

- 1) The 2 Eons
- 2) The 5 Eras
- 3) The 12 Periods
- 4) The 7 Epochs
- 5) The Age of Earth
- 6) Age of Beginning of Paleozoic Period
- 7) Age of Beginning of Mesozoic Period
- 8) Age of Beginning of Cenozoic Period

EON	ERA	PERIOD	EPOCH	MYA			
PHANEROZOIC	CENOZOIC	QUATERNARY		RECENT	0.01	← ICE AGE ENDS	
				PLEISTOCENE	1.6	← ICE AGE BEGINS EARLIEST HUMANS	
		TERTIARY	PALEOGENE		PLIOCENE	5.3	
					MIOCENE	23.7	
			NEOGENE		OLIGOCENE	36.6	← FORMATION OF HIMALAYAS
					PALEOCENE	57.8	
	MESOZOIC	CRETACEOUS			66	← DINOSAUR EXTINCTION ROCKY MTS. FORMED	
			JURASSIC	144			
			TRIASSIC	208		← FIRST MAMMALS PANGEA BREAK UP FIRST DINOSAURS

	ARCHEAN EON			2500	← EARLIEST SHELLED ANIMALS		
				3800			
				4600	← EARLIEST FOSSIL RECORDED OF LIFE		

Note: You will need to memorize this basic geo-timescale for the final exam.

Head's-Up for Next Week's Lab

Earthquakes

Next Week's Lab Activities

- 1) Measure Epicenter and Magnitude
- 2) Ground Motion Experiment
- 3) Measure Fault Displacement

Preparation

Recommended Pre-Lab Web Activities (Click on Link)

- 1) [Learn About Earthquakes - USGS Site](#)
- 2) [Virtual Earthquake!](#)
- 3) [World ocean bottom features and Tectonic plate boundaries](#)

EARTHQUAKE TOPICS

What are Earthquakes?

Where and How do Earthquake Form?

How are Earthquakes Measured?

What are the Effects of Earthquakes?

Can we Predict Earthquakes?

How can we Prepare for an Earthquake?
