

Mineral Properties and Classification

Physical Geology – GEOL 100

Ray Rector - Instructor

http://www.rockhounds.com/rockshop/mineral_id/index.html

MINERAL INQUIRY

I. What are Minerals?

- ✓ How do minerals form?
- ✓ Where are minerals found?
- ✓ What types of minerals are there?
- ✓ The common rock-forming minerals?

II. Classification of Minerals – Mineral Groups

III. The Physical Properties of Minerals

- ✓ The most important properties?
- ✓ How do you determine these properties?

IV. Determining the Identify of a Mineral

What are Minerals?

Definition: any *naturally-occurring*, homogeneous solid that has a distinctive internal *crystalline* structure, a *definite chemical composition* and a set of *unique physical properties*. Minerals are usually *formed by inorganic processes*.

What Makes Each Mineral Unique?

A mineral's *crystal structure* and *chemical composition* together determine the mineral's unique *physical properties*

How do Minerals Form?

1) Crystallization from a cooling magma or lava

2) Crystallization from aqueous solutions

3) Crystallization from preexisting minerals

Where are Minerals Found?

Short Answer = Everywhere!

- 1) Igneous Rocks
- 2) Sedimentary Rocks
- 3) Metamorphic Rocks
- 4) Sediment

Various Types of Minerals

- ✓ Over 4000 Species
- ✓ Grouped into Categories
- ✓ Silicate group is by far the largest and most important mineral group
- ✓ Only about 20 minerals make up 95%+ of all rocks
- ✓ Minerals are identified by their Chemical and Physical Properties

Common Rock-Forming Minerals

Earth Materials

Common Silicate Mineral Groups

1) Tetrasilicates

- ✓ Olivine and Quartz

2) Pyroxenes

- ✓ Augite most common

3) Amphiboles

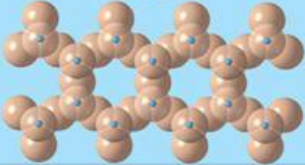

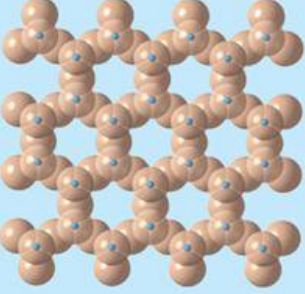

- ✓ Hornblende most common

4) Phyllosilicates

- ✓ Micas and Clays

5) Feldspars

- ✓ K-feldspar and Plagioclase

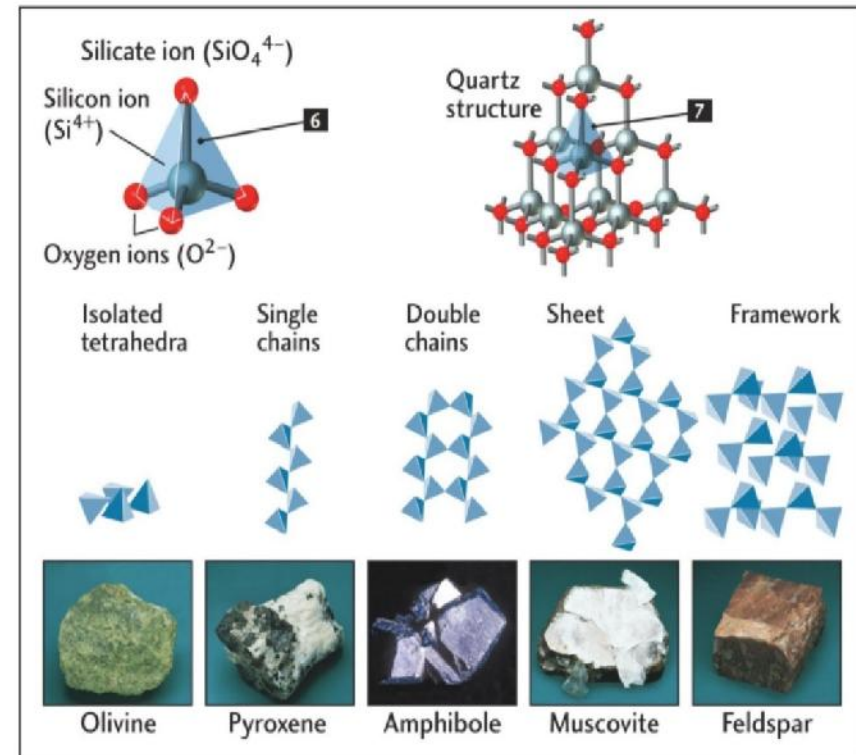

Mineral/Formula	Cleavage	Silicate Structure	Example
Olivine group (Mg, Fe) ₂ SiO ₄	None	Independent tetrahedron 	 Olivine
Pyroxene group (Augite) (Mg, Fe)SiO ₃	Two planes at right angles	Single chains 	 Augite
Amphibole group (Hornblende) Ca ₂ (Fe, Mg) ₅ Si ₈ O ₂₂ (OH) ₂	Two planes at 60° and 120°	Double chains 	 Hornblende
Micas	One plane	Sheets 	Biotite K(Mg, Fe) ₃ AlSi ₃ O ₁₀ (OH) ₂  Biotite
			Muscovite KAl ₂ (AlSi ₃ O ₁₀)(OH) ₂  Muscovite
Feldspars	Two planes at 90°	Three-dimensional networks 	Potassium feldspar (Orthoclase) KAlSi ₃ O ₈  Potassium feldspar
			Plagioclase feldspar (Ca, Na)AlSi ₃ O ₈  Quartz
Quartz SiO ₂	None		 Quartz

Common Rock-Forming Minerals

Rock-Forming Minerals

- ◆ Clay
- ◆ Quartz
- ◆ Calcite
- ◆ Olivine
- ◆ Dolomite
- ◆ Pyroxene
- ◆ Amphibole
- ◆ Biotite, Muscovite Micas
- ◆ Orthoclase, Plagioclase Feldspars

Although there are very many *rock types*, they are mainly built from one or more of 11 rock-forming minerals. Others are uncommon to rare.

Most-Common Rock-Forming Minerals

- 1) Quartz
- 2) Na- Plagioclase
- 3) Ca- Plagioclase
- 4) K-Feldspar
- 5) Hornblende (amphibole)
- 6) Augite (pyroxene)
- 7) Olivine
- 8) Tourmaline
- 9) Garnet
- 10) Biotite
- 11) Muscovite
- 12) Chlorite
- 13) Kaolin (type of clay)
- 14) Calcite
- 15) Dolomite
- 16) Gypsum
- 17) Halite
- 18) Magnetite
- 19) Hematite
- 20) Limonite
- 21) Pyrite

Important Mineral ID Properties

1) Crystal Form & Habit

2) Luster

3) Color

4) Hardness

5) Cleavage

6) Other properties

- Streak
- Reaction to acid
- Magnetic
- Taste

Mineral Habit

Defined: Characteristic external habit or shape of an individual crystal or groups of crystals

Crystal habit is divided into several categories, based on:

- Internal crystal structure
- External crystal shape

Crystal habit is useful for mineral ID, but can be confused with cleavage faces.

Crystal Habit

- Crystal habit is the ideal shape of crystal faces.
- Ideal faces require ideal growth conditions.
- Many descriptive terms are used to characterize habit.

Essentials of Geology, 3rd edition, by Stephen Marshak Chapter 3: Patterns in Nature: Minerals

Isometric	Hexagonal	Tetragonal	Trigonal	Orthorhombic	Monoclinic	Triclinic
Isometric	Hexagonal	Tetragonal	Trigonal	Orthorhombic	Monoclinic	Triclinic

Mineral Luster

Defined: The quality of reflected light emitted by a mineral crystal

Luster can be divided into two useful categories:

- Metallic and Nonmetallic

Nonmetallic lusters can be further subdivided into:

- Glassy, Pearly, Waxy, and Dull

Luster is useful for mineral ID

- <http://cmssc.minotstateu.edu/Labs/web%20minerals/minerals%20lab.html>

Mineral Streak

Defined: The color of the crushed powder of a mineral left on a porcelain plate

✓ **Only** for determining the **metallic** minerals

✓ Only works is mineral has lower hardness than the streak plate

Mineral Color

Defined: The hue and shade of the reflected light emitted by a mineral crystal

Mineral color can be divided into two useful shade categories:

- Dark-colored and Light-colored

Color can also be divided into the hue categories:

- White, Gray, Black, Red, Orange, Yellow, Green, Blue, Purple, etc.
- Color is useful for mineral ID

Mineral Hardness

- ✓ Mohs Hardness Scale
- ✓ Identify Mineral by Testing for Hardness
- ✓ Doing the Scratch Test
- ✓ Other Testing Objects

Mineral Cleavage

Defined: Geometric planes of inherent weakness through a mineral crystal

- ✓ Each mineral has a unique identifying cleavage property
- ✓ A mineral has either none, one, two, four, or six sets of cleavage
- ✓ Cleavage is observed as shiny parallel planes on the surfaces of a mineral crystal

Cleavage in one direction. Example: MUSCOVITE

Cleavage in two directions. Example: FELDSPAR

Cleavage in three directions. Example: HALITE

Cleavage in two directions. Example: CALCITE

Mineral Cleavage Quality

Cleavage is observed as shiny parallel planes on the surfaces of a mineral crystal

- ✓ **Quality:** Variation in degree of smoothness of cleavage surface.
- ✓ Each mineral has a unique cleavage quality
- ✓ A mineral has either excellent/ perfect, good, poor, or none

A. Reflected Light from Smooth Cleavage Surface

B. Reflected Light from Stepped Cleavage Surfaces

C. Reflected Light from Fracture

Determining Mineral Cleavage

No Cleavage

Example =
Quartz

One Set of Cleavage

Example = Muscovite

Two Sets of Cleavage

✓ 90 degrees

✓ Example = Augite

Two Sets of Cleavage

✓ 120 & 60 degrees

✓ Example =
Hornblende

Determining Mineral Cleavage

Three Sets of Cleavage

- ✓ 90 degrees
- ✓ Example = Halite

Three Sets of Cleavage

- ✓ 120 & 60 degrees
- ✓ Example = Calcite

Reaction to Acid – The “Acid” Test

Defined: Some minerals react to acid solution (HCl) - they start to bubble and dissolve

- ✓ Good for determining the **carbonate** minerals
- ✓ Use the acid test only if you think that your unknown mineral has low hardness – close to 3.
- ✓ Typically either calcite or dolomite

Magnetism – The “Magnet” Test

Defined: Some minerals are magnetic – some weakly, some strongly. A magnet will stick to a magnetic mineral.

✓ Good for determining the certain ***magnetite and hematite***

✓ Need a hand-held magnet.

Fluorescence— The “Black-light” Test

Defined: Some minerals fluoresce under ultraviolet light.

- ✓ Good for determining the certain **ore and gem** minerals
- ✓ Need a hand-held black-light instrument.

Distinguishing Between K-Feldspar and Plagioclase

Potassium Feldspar

- ✓ Orthoclase and Microcline
- ✓ Salmon pink- to white cream-colored
- ✓ Wavy “flame-like” streaks

Plagioclase Feldspar

- ✓ Albite, Oligoclase, Andesine, Labradorite, Bytownite, Anorthite
- ✓ White- to Dark grey-colored
- ✓ Sets of thin, straight, groove-like striations on some cleavage faces

Mineral Identification Procedure

Step #1 Mineral Luster? – Metallic or Nonmetallic?

Metallic

Nonmetallic

Step #2 Mineral Hardness?

Step #2 Mineral Color? – Light or Dark

Step #3 Mineral Streak?

Step #3 Mineral Hardness?

Step #4 Other Properties?

Step #4 Mineral Cleavage?

Step #5 Mineral Name?

Step #5 Other Defining Properties?

Step #6 Mineral Name?

Next Lecture Topic

Igneous Rocks

- Define
- Origin and Importance to Formation of Igneous Rocks
- Classification – Igneous Rock Groups
- Physical Properties
- Identification of Hand Specimens

Preparation

- Read Mineral and Igneous Chapter in Textbook
- Study Lecture Notes and PowerPoint
